

## **Cisco CCNA (200-301)**

### **Configuring and Verifying Interswitch Connectivity**

Learner Objective: Configure and Verify Interswitch Connectivity.

Description: Working with multiple switches requires planning and consideration of what must be configured if it is to serve the business effectively. You will learn how to make sure that a multiple switches environment is working together efficiently and effectively.

**Q: How does working with multiple switches change things?**

We must consider trunking.

**Q: What is trunking and why do we need it?**

**Q: How do we configure it?**

- Trunking
- 802.1Q
- Native VLAN

### **Endnotes, External, etc.,**

- 2.2 Configure and verify interswitch connectivity
  - 2.2.a Trunk ports
  - 2.2.b 802.1Q
  - 2.2.c Native VLAN
- Exam 200-301 objectives
